This new journal is designed for the publication of papers in the field of biophysics where biophysics is defined as the approach towards the understanding of biological functions through physical interpretation. The papers contribute to this objective—to explain biological functions (and facts) according to general laws of physics.

Biophysics of Structure and Mechanism publishes results of experimental and theoretical studies on the following range of subjects:

- 1. Molecular structure, structural change and its biological function.** This major concern of the journal includes x-ray structure analysis; spectroscopic studies, such as NMR-, CD-, ORD-, IR-, VIS-, UV-, and ESR-studies; kinetics of reactions; interactions of molecules, etc.
- 2. Transport phenomena and thermodynamics of irreversible processes applied to biological phenomena.** Since there exists a great number of journals which deal with the field of membranes, this journal will restrict itself to membrane biophysics in which emphasis is placed on the more physical approach to the membranes.
- 3. Primary reactions in photosyntheses and sensory transduction.** This journal is not intended to be limited to a narrow field but rather to be a representative image of the important developments in biophysics within the broad boundaries described.

Chemotherapy and immunosuppression are relative newcomers among the weapons which the medical profession can employ in the fight against cancer and in the transplantation of tissue, respectively. A detailed treatment of these fields is therefore timely. These volumes deal with the pharmacological, biochemical and toxicological principles and concepts employed in the development, study, and effective use of antineoplastic and immunosuppressive agents. The therapeutic modalities of radiation and drugs, including alkylating agents, hormones, antimetabolites, and other cytotoxic compounds are described with respect to their mechanisms of action. There is a discussion of cell-cycle kinetics and drug design and pharmacologic factors to be considered in action.

Introducing the 1st multidisciplinary guide to review articles

INDEX TO SCIENTIFIC REVIEWS™

Now you can easily find review articles on any subject in science. Each year the *Index to Scientific Reviews (ISR™)* will index over 16,000 reviews selected from more than 2,700 of the world's most important journals.

Broad Coverage

Over 100 disciplines in every area of science are covered:

Agricultural, Biological & Environmental Sciences
Engineering, Technology & Applied Sciences
Medical & Life Sciences
Physical & Chemical Sciences
Social & Behavioral Sciences

So you won't have to go through separate references to locate review articles for subjects in any of these areas. With one index—the *ISR*—you can cross disciplinary lines and retrieve these key articles no matter where they were published in the literature. The *ISR* will even cover the literature published in quarterly and annual "review" publications (e.g., *Annual Review of Genetics*).

Effectively Indexed

The *Index to Scientific Reviews* makes it

easy to find the review articles you need. Search by authors, title words and phrases, and organizations. Or use the *ISR*'s citation index—it lets you start a search with previously published material relevant to a subject and find more recent articles through citation relationships.

Highly Current

The *ISR* indexes the review literature on a calendar year basis. A soft-bound semi-annual issue (covering January to June) will be available each September, and a hard-bound annual cumulation will appear the following April. So you can find new articles while they're still new.

What's It To You?

The *ISR* is a quick and easy way to find: 1) summaries of knowledge in fields unfamiliar to you, 2) those key articles you need to start a really thorough literature search, 3) the most recent review articles on any subject in science.

For More Information . . .

The first *ISR* annual cumulation (covering the 1974 literature) will soon be out, so get the full story on the *Index to Scientific Reviews* now. Just fill in the coupon, and mail it today.
